Brainstorming & Idea Prioritization

Date	15 September 2026
Team ID	SWTID-2026-2630
Project Name	AI Fit Track API
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member listed ideas independently during the kickoff session on 15 September 2026, before grouping and rating them.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Thamarai Selvan M	A centralized backend so fitness enthusiasts stop logging workouts in notebooks and spreadsheets, with secure JWT-protected accounts	Backend / Security	1
2	Thamarai Selvan M	Full CRUD on workout records (add/view/update/delete) with search by name, category or date	Backend / Core Feature	1
3	Bhavesh K M	Encrypt passwords with bcrypt and never store or return raw credentials	Security	1
4	Vishwa R	Use Google Gemini to turn a user's age, fitness goal and experience level into a personalized weekly workout plan	Generative AI	1
5	Mariya Akash A	AI-generated fitness insights that summarize a user's workout statistics (total workouts, average duration, calories burned)	Generative AI	1
6	Deepak Vishal S	Workout categories restricted to a fixed enum (Cardio, Strength Training, Yoga, Running, Cycling, Walking) to keep data clean for future analytics	Data Modeling	1
7	Mariya Akash A	A future exercise-level breakdown (sets/reps per exercise) and a progress-tracking module (weight, body fat %) for a later release	Future Scope	2

Step 2: Idea Prioritization

Group No.	Final Idea	Feasibility	Importance	Priority	Selected (Yes/No)
1	**AI Fit Track** – a secure backend that replaces manual workout logging with authenticated CRUD tracking and Google Gemini-powered recommendations & insights	High	High	High	Yes
2	Exercise-level breakdown and a dedicated progress-tracking module (weight, body fat %)	Medium	Medium	Medium	No – deferred to future roadmap (see Scalability & Future Plan)

Group 1 was selected as the team's final idea for the 15–29 September 2026 build cycle because it directly combined the team's strongest skills (Node.js/Express backend, MongoDB/Mongoose, and Generative AI integration) with a clear, demonstrable fitness-tracking problem.
