Define Problem Statements (Customer Problem Statement Template)

The team used the Customer Problem Statement template to understand the perspective of **Rahul**, a fitness enthusiast who exercises regularly but records his workouts manually using notebooks and spreadsheets.

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Rahul, a fitness enthusiast who trains consistently	keep one organized, centralized history of every workout he's completed	ends up with fragmented, scattered logs across notebooks and spreadsheets	there is no centralized database, so historical training data gets lost or inconsistent	disorganized and unsure how much progress he's actually made
PS-2	Rahul, tracking duration and calories by hand	trust that his workout metrics are accurate	manual entry introduces human error into duration, metric and calorie calculations	there's no validated, structured system enforcing correct data on entry	uncertain whether his own numbers are even reliable
PS-3	Rahul, deciding what to train next	get professional-grade guidance on which workouts suit his current fitness level	has no coach and no tool that reasons over his own history to suggest anything	there is no AI layer connecting his real workout data to personalized recommendations	stuck guessing instead of following a plan tailored to him
