Problem-Solution Fit

Date	17 September 2026
Team ID	SWTID-2026-2630
Project Name	AI Fit Track API
Maximum Marks	2 Marks

Problem-Solution Fit

CUSTOMER SEGMENT(S)

- Individual fitness enthusiasts who train regularly (gym-goers, runners, cyclists, home-workout users)
- Persona: Rahul – logs workouts manually today, wants organized history plus guidance on what to do next

PROBLEM

- Fragmented, inconsistent workout logs kept in notebooks/spreadsheets
- Manual entry causes inaccurate duration/calorie data
- No AI-driven guidance based on a user's own real workout history

EXISTING ALTERNATIVES

- Paper notebooks and personal spreadsheets
- Generic workout-plan articles/videos not personalized to the user's own logged history

SOLUTION

- Secure, JWT-authenticated REST backend for full workout CRUD + search
- Google Gemini-powered workout recommendation (from age, goal, experience) and fitness insights (from logged history)

FIT VALIDATION

— The solution directly answers the problem: centralized MongoDB storage removes fragmentation, Mongoose schema validation (required fields, enums, min values) removes manual-entry error, and the two Gemini-backed AI endpoints supply exactly the guidance layer that notebooks and generic plans cannot.
